

Daniel Reynaud

web developer

Citizenship: French

mail: reynauddaniel26@gmail.com

25 years old

Driving licence

3+ years of experience showed me what I really liked: building tools and sites for the world to use.

I have advanced skills and experience with all front web technologies (JavaScript, HTML, CSS) including a few back-end technologies; especially PHP and MySQL. Structure and order are my priorities! My work stands for quality and attention to details. I am always seeking news on the latest technologies in order to keep being up to date.

EDUCATION

- 2016 **Bachelor degree Computer system and Software**
Speciality: Information system and project management - University IUT 2 – UPMF (Grenoble - 38)
- 2014 **Advanced Diploma Computer Science and Networks**
College Saint Louis (Crest - 26)
- 2012 **NCEA Science and Industry Technology** - Boissy d'Anglas High School (Annonay - 07)

WORK EXPERIENCE

November 2018 – Now

Developer

@GP - atgp.net (Valence)

I'm working there as a web developer, building and maintaining various tools for customers and co-workers. I've participated in creating a certified data pool web service in Symfony 4. I participated in protecting SQL requests from injection, migrating from PHP 5.4 to PHP 7.3. I'm currently in charge of a project of statistic and logistic for a well known French retail corporation.

Technologies: PHP, MySQL, JQuery, Symfony 4, GIT

February 2017 – October 2018

Study and development engineer

Spartoo.com (Grenoble)

I'm developing numerous tools for our Purchase and Store departments: Markup tool, the certification of checkout systems, store layout planning, analysis software solution. The latter dramatically improves the retail space planning process. With two development teams, this job helped me a lot to learn what developing really is. Working alongside my colleagues, their trust and advice gave me enough confidence to be an efficient member of our team even taking part in the biggest projects.

Technologies: SVN, Javascript, Ajax, PHP, MySQL, MariaDB

September 2016 – January 2017

Web developer / IT Manager

Evioo.com (Grenoble)

This is my first job after my studies: I developed and maintained an intranet and front website, designed new applications and provided maintenance and technical support for all stores. Sadly, the company closed its door.

Technologies: Ubuntu 16.04, Symfony 3.1, jQuery, mySQL, Solr, Jenkins

September 2015 – August 2016

Web developer

STMicroelectronics (Grenoble)

My second internship and the place I eventually graduated was at STMicroelectronics. I created two online tools in MVC for the Project Management Office team. The first one is ScheduleDB, a schedule tool used to monitor milestones and the progress of every project of the company. The second one, ConsoTLS, analyses and compiles project data such as details of their employees and working hours.

Technologies: PHP, JS, jQuery, MySQL, PHPExcel, HTML / CSS, Ajax, Bootstrap.

September 2014 - August 2015

Helpdesk Technician**Osiatis** (Eybens)

I worked for Osiatis for a year letting me save enough money to continue my studies. My main activity was to deal with support calls from customers, manage incident tickets and their escalation. I managed to use my work there to develop some, still used, tools for every technician in AutoIT and HTML/PHP.

Technologies: AD, Exchange, ITIL.*June – July 2013***Web developer (trainee)****DSweb** (Davezieux)

My very first experience in web development at DSweb was a short internship with an interesting project. I created a website for an interactive terminal in a karting business. This project allowed customers to create an account, login, take a selfie for the profile picture and see all their achievements saved as high scores.

Technologies: PHP, MySQL, Javascript, jQuery, Opéra, HTML, CSS.

TECHNOLOGIES / SKILLS

IDE: PHPStorm**Languages:** PHP, JavaScript, JQuery, HTML, CSS, Ajax, MySQL**OS:** Linux (Debian 9, KDE), Windows (all versions).**Personal project:**

- Author and webmaster of LMVB.fr (not online anymore), Volley-ball organisation.
- Development of a little game app on Android (java).
- Author and webmaster of CS2607.fr, an organisation willing to protect and heal wild animals.
- Multiple app development for planet-casio.com in (basic).
- Grimtyr.com, personal playground to learn how to use Git, Laravel, Vue.

ABOUT ME

Interests:

- I've played Volleyball since I was seven years old, and I will surely never quit.
- I like thrills in many ways, I've been paragliding for a couple of years now and still looking for new challenges.
- One of my biggest concerns since I'm a child is animal welfare.

Languages: French (native); English (good command)
